

<b>Examiner-Initiated Interview Summary</b>		<b>Application No.</b>	<b>Applicant(s)</b>
		10/500,098	FRAME, ANNE D.
		<b>Examiner</b>	<b>Art Unit</b>
		Patricia Leith	1655

**All Participants:**

(1) Patricia Leith.

(2) Michael David.

**Date of Interview:** 16 April 2010

**Type of Interview:**

☒ Telephonic

☐ Video Conference

☐ Personal (Copy given to: ☐ Applicant ☐ Applicant's representative)

**Exhibit Shown or Demonstrated:** ☒ Yes ☐ No

If Yes, provide a brief description:

**Status of Application:** After FAOM

(3) \_\_\_\_\_

(4) \_\_\_\_\_

**Time:** 3pm EST

**Part I.**

**Rejection(s) discussed:**

*none*

**Claims discussed:**

*32, 40-41, 47-49, 56-59 and 62-65*

**Prior art documents discussed:**

*Frame et al., McMurtry, Greenspan et al.*

**Part II.**

**SUBSTANCE OF INTERVIEW DESCRIBING THE GENERAL NATURE OF WHAT WAS DISCUSSED:**

*See Continuation Sheet*

**Part III.**

☒ It is not necessary for applicant to provide a separate record of the substance of the interview, since the interview directly resulted in the allowance of the application. The examiner will provide a written summary of the substance of the interview in the Notice of Allowability.

☐ It is not necessary for applicant to provide a separate record of the substance of the interview, since the interview did not result in resolution of all issues. A brief summary by the examiner appears in Part II above.

/Patricia Leith/  
Primary Examiner, Art Unit 1655

(Applicant/Applicant's Representative Signature – if appropriate)

Continuation of Substance of Interview including description of the general nature of what was discussed: Discussed proposed claims in examiner's amendment. Discussed allowable subject matter extensively. Offered certain claims to a method for treating Mycobacterium, Mr. David indicated that M smegmatis is an appropriate model for other strains of Mycobacterium and provided extrinsic evidence to show that M smegmatis is used as a genetic model for other strains of this bacteria and further that the cell walls of Mycobacterium are relatively similar. Thus, the compound cobaltocene octomethyl is likely to inhibit the growth of other Mycobacterium species. Mr. David will be submitting an IDS today providing the references we discussed in this interview.
